What is articulated credit?

We are going to focus on articulated credit that can be obtained through a formal articulation agreement between at Secondary CTE program and a post-secondary institution.

Why do we use Articulated Credit?

- CTE programs must have some kind of agreement between their program and a Post-Secondary school.
- Students already have the skills from their CTE class, they don't need the repeat. (non-duplicative credit)
- It is generally free, so students and CTE programs can afford to work with this type of credit.
- It is used as an incentive to draw skilled students to a Post-Secondary school.

What do CTE programs need for Perkins?

- an articulation agreement
- a program of study starting with high school and continuing on to the Post-Secondary plan. (With the purpose of helping high school students plan their high school career so that they earn their credit and are prepared for college level material)
- a matching approved Post-Secondary program in the state's reporting system (MEGS+) This seems to be a problem for secondary reporting, even with the statewide agreements in place.

What happens to CTE students?

- Someone, generally the program teachers make their students aware of the opportunity.
- If a program or group of programs (CEPD/Region) can, they have additional staff that assist with this process.
 Not every program has additional staff.
- Sometimes a post-secondary representative comes to speak about articulated credit.

What happens to CTE students?

- Students apply for the articulated credit.
- They are advised of the process and any additional steps and requirements that they should take (completion of a certain number of credits at the P.S. school, testing, etc.)

What happens to CTE students?

- The teacher completes the skills check off or some other method of signing off on a student's ability to meet the criteria at a post-secondary level.
- This paperwork is sent to and processed by the postsecondary school.
- Once all requirements are met, the student is granted the credit.

Charlie's story

- Charlie has tried to do everything we hope students do, he knows the file d he wants to go into, has taken CTE classes for early training, and earned at least one industry certification.
- By the time I spoke with Charlie and his father, they
 had contacted his future 4-year university, spoken to
 counselors at a 2-year college where he will be
 attending in the fall, and contacted the career tech
 high school.

Charlie's story

- This took over a week just to get the information he needed and to start the paperwork.
- Charlie's story is very similar to many students, often ending with the question, "This might not transfer from college A to University B? Why are we doing this paperwork then?
- Charlie gave me permission to share his story.

What does this mean?

- Students are attending college.
- They are more informed about the cost, and many are trying to find a way to afford it.
- Students are using articulated credit.
- More staff are informed about articulated credit than were in the recent past.

What are some common issues? (The students)

- Students do not always understand that articulated credit is course specific.
- Students think that the credit is "transferred" automatically.
- Students do not complete the additional requirements.
- Students do not apply for the credit early (before their first semester of college).
- Students are frustrated with the delay in paperwork and decide to leave their post-secondary school.

What are some common issues? (secondary CTE programs)

- Instructors do not work summers when graduated students come looking for someone to sign the paperwork. This makes it difficult for Post-secondary counselors to advise these students.
- Each secondary CTE program/school has a different person who works with students on paperwork. Often, this person is not someone who does not specialize in articulated credit.
- Secondary staff no longer has information regarding this student.
 - out-of-date contact information
 - no way to know if a student follows through/is awarded credit

What are some common issues? (post-secondary)

- Each post-secondary school has a different process.
- Post-secondary counselors do not always know who to contact at the secondary CTE school.
- When a student transfers from a 2-year college to a 4-year institution, the articulated credits are generally not accepted.

What are some common issues? (other considerations)

- CTE courses and credits that are awarded are not always well matched
 - o courses are not always necessary for the degree
 - students are receiving credit for classes far below the level they have been working at in the CTE program
- Demands on secondary and post-secondary staff make it difficult to meet and discuss courses, especially when there is a large distance. This can make it difficult for post-secondary instructors to feel confident that the student's work is equivalent.

What are some common issues? (other considerations)

- This does not always address careers that require or prefer apprenticeships
 - Students may still be able to use this credit, but don't always think of college and apprenticeship classes as the same thing
 - Businesses do not always know that this is available for the apprentice
- This can cost the student and/or the employer time and money.

What alternatives are being granted?

- More secondary schools are looking to:
 - direct credit
 - concurrent enrollment
 - early college
 - o dual enrollment
- Students benefit from these programs.
- The rapid expanding of these programs without a lot of communication between all people involved can cause new issues.
